Subject Index

Absorber concentration, determination of, 80
Algorithm
  binary decision, 110
  diagnostic decision, 110
Algorithm development, 195
δ-Amino levulinic acid, PpIX tissue sensitization and, 123–124, 130
Angiogenesis, 185
Architectural features, malignant melanoma, 143

Beer-Lambert law, optical quantitation of absorbers based on, 75
Bone, optical biopsy of, 68
Breast
  normal human female, 171
  normal vs tumor-bearing, 31
Bronchoscopy, 194

Cancer, head and neck, ALA-induced PpIX fluorescence and, 126
Cancer years, normal female breast in, 172
Carcinoma
  breast, 184
  classification of, with DNF, 118
Carcinoma *in situ*, LIAFS and, 130
Cell cluster optics, 194
Clinical impact, optical biopsy, three scenarios of, 72
Clinical measurements, LIF and, 117
Collector, photons arriving early at, 1
Colon spectra, 110
Colonoscopy, 194
Concentration, quantitation of changes in, 86
Confocal microscopy, optical biopsy and, 59
Constrained classical path, photon velocity and, 7
Continuous light, NIR images using, 29
Contrast agent dynamics, 31
$Cr^{4+}:Mg_2SiO_4$ laser, 101
Cystoscopy, 194
Cytokeratin, optical biopsy of, 150
Cytological features, malignant melanoma, 144

Desmoplasia, breast carcinoma and, 188
Diagnostic applications, laser, 195
Differential normalized fluorescence method, laser-induced, 118
Diffusion theory, definition of, 1
Dual-site spectroscopy, equation for, 82
Dual-wavelength spectroscopy, equation for, 82
Dysplasia, diagnosis of, with DNF, 118
Dysplastic lesion, colonic mucosa, 112

Electronic time gate, 19
Ensemble of photons, unconstrained classical path for, 9
Esophageal cancer, LIF and, 116
Excitation wavelength, dependence of LIAFS on, 130

Fertility, restoration of, 71
Fiber optic coupler, OCT system and, 99
Fibroadenoma, breast, 180
Fibrocystic disease, 180
Fluence rate, probability and, 6
Fluorescence
  tissue, 109
  ultra-weak, 194
Fluorescence emission spectrum, measurements of, 64
Fluorescence lifetime spectroscopic imaging, 46
Fluorescence polarization difference imaging, 20
Fluorophores
  exogenous, 188
  most important, 153
  naturally occurring, breast, 177
Frequency domain response, system function and, 79
Frequency domain photon migration
  multi-pixel measurements of, 50
  single-pixel measurements of, 48
Functional images, TRS, 37

Group path, ensemble of photons and, 9

Hemorrhage and biopsy, breast, 188
High-speed and high-resolution OCT, 95
Histology, limitations of, 108

Immune response, 185
Impulse response, temporal integration of, 78

In vivo human skin, multiphoton excitation microscopy of, 58
Inflammation, 185
Intravascular ultrasound catheter, OCT catheter-endoscope and, 104
Inversion algorithm, FLI and, 54

Keratin filaments, intermediate, 152
Kerr-Fourier imaging system, 18

Laser-induced autofluorescence spectroscopy, excitation wavelength in, 130
Laser-induced fluorescence, cancer and dysplasia diagnosis with, 116
Laser-induced spectroscopic methods, tissue characterization and, 123
Light absorbers, breast, 176
Light scatterers, breast, 175
Lost positional sensitivity, 38
Low-coherence interferometry, schematic of, 97

Magnetic resonance imaging, contrast in, 29
Malignant melanoma, architectural and cytological features of, 143
Medical applications, time-resolved and nonlinear optical imaging for, 14
Monte Carlo simulations
  definition of, 1
  squamous cell carcinoma and, 159
Mucosal dysplasia, fluorescence and, 109
Multiphoton excitation microscopy, fluorescence imaging vs, 60
Multiphoton scanning microscope, 62
Multi-pixel measurements, FDPM and, 50

Near-infrared images, continuous, phase-modulated, and pulsed light and, 29
Nicotinamide adenine dinucleotide, reduced form of, 150
Nonlinear optical subsurface mapping methods, 23
Nuclear magnetic resonance, contrast in, 29

Optical body scanning, scope of, 17
Optical coherence tomography
  high-speed and high-resolution, 95
  optical biopsy with, 68
Optical coherence tomography catheter-endoscope for transverse imaging, schematic of, 103
Optical coherence tomography system, schematic of, 70
Optical computerized tomography, new approach to, 75
Optically active components, breast, 174

Path integral method, basic idea of, 2
Pathology correlations, optical biopsy techniques and, 143
Phase modulation spectroscopy, equation for, 82
Phase-modulated light, NIR images using, 29
Phased array image, 42
Phased array localization, 38
Photon, scattering media and, 15
Photon migration, measurements of, 46
Photon transport, probability of, 2
Prepubertal development, breast, 172
Probability, photon transport and, 2
Protoporphyrin IX tissue sensitization, 124, 130
Pulsed light, NIR images using, 29

Quantitation of absorbers, 75

Reconstruction of CT image, 83, 89
Rescaling procedure, physical basis of, 160

Scattering media, photon in, 15
Shadowgram, transillumination imaging technique and, 14
Single-pixel measurements, FDPM and, 84
Skin anatomy, 58
Skin autofluorescence, 59
Solid state laser sources, 102
Spectral pathology, 108
Squamous carcinoma, desmosomea in, 154
Squamous epithelium, multicellular, 151
Stand-alone device, breast sudy by, 42
Superluminescent diodes, OCT and, 98

Temporal integration, impulse response and, 78
Temporal integration spectroscopy, equation for, 81
Testis, optical biopsy of, 68
Therapeutic applications, laser, 195
Ti:Al_2O_3 laser, 98
Time-resolved methods, 17
Time-resolved spectroscopy
  equation for, 81
  second tumor contrast and, 33
Tissue characterization, laser-induced spectroscopic methods in, 123
Tissue morphology, 194

Tomographic image, reconstruction of, 83, 89
Tumor
  bladder, LIAFS and, 130
  contrast agents for, 32
  nonmelanoma malignant skin, 124
  urinary bladder, 124
Tumor border zone, 150
Turbid media, optical quantitation of absorbers in, 75
Two-photon excitation microscopy, 61

Ultrasound, Oct vs, 69
Unconstrained classical path, ensemble of photons and, 9
